

Community Impact – Map Brief

This 2006 brief illustrates which communities in Missouri and Illinois may potentially be impacted by job losses due to the closure of the Ford Motor Plant in Hazelwood, Missouri. Geographic information system (GIS) analysis was conducted to see where Ford Plant workers live. Local Employment Dynamics (LED) data from 2003 was used in the study.

The *LED Overview Map* shows that most workers live near the Ford Plant, located in the northern St. Louis County.

The *LED City Impact Map* notes cities where concentrations of Ford Plant employees were located in 2003. The map of cities does not represent all communities potentially impacted by job losses, only those where clusters of higher worker concentrations are located. As the *LED Overview Map* shows, impacts will be felt throughout the St. Louis Metro region.
